

**Draft Work Plan for Strengthening Institutional and Policy Framework on DRR and CCA Integration**  
**Group Work Sheet: Viet Nam**

**1. Objective**

*To be discussed*

**5. Implementation structure**

**a. Working Group on Prevention and Mitigation**

The WG on P&M is responsible for:

- Compilation and procession of the Information and knowledge collected from the Member States, sharing it among them and reporting it to the ACDM Meeting;
  - Coordination and facilitation of mutual cooperation activities among the Member States by referring to their annual reviews and by using local resources; and
  - Sharing regional needs for DRR and CCA integration with development partners and developing regional programmes with them.
- *Basically agree with the above 3 responsibilities but the viability is questionable because of the constraints of human resources and budget.*

**b. ACDM National Focal Point**

Each ACDM National Focal Point collects relevant information listed in Table 1 from line agencies, reviews it and reports it to the WG on P&M annually with particular focuses on:

- Management of disaster, hydro-meteorological, risk, vulnerability and socio-economic data and sharing of them with relevant agencies for synthetic analysis;
  - Reviewing of DRR and CCA related plans and activities for close coordination and knowledge sharing among relevant agencies; and
  - Capacity building and needs assessment based on the reviewing results, development of training programmes using domestic resources, and recommendation of resource institutions and agencies possible to provide capacity building services regionally.
- *We need support for how to collect relevant information, and how to make the report.*

**6. Immediate collaborative activities**

Following immediate collaborative activities will be implemented from 2018 under the Work Plan:

- *To develop the indicator set for monitoring and assessment of the impact of climate change on disaster for the ASEAN region*
- *To make mechanism to share information of disaster data, policy on DRR & CCA*

**7. Further challenges**

In order to strengthen DRR and CCA integration further beyond this Work Plan, following activities shall be planned in parallel:

Each ASEAN Member State:

- *To exchange, share among ASEAN member countries about how to develop hazard maps*
- *To develop guideline for risk assessment and planning for DRR and CCA*

Working Group on Prevention and Mitigation:

Table1 DRR and CCA activities to be implemented and reported by each ASEAN Member State

Activities		Review points
1. Institutional and policy development		
1.1 Policies, laws and regulations	National socio-economic development plan	OK
	DRR and CCA laws and regulations	OK
	DRR and CCA related sectoral laws and regulations	OK
1.2 Management system	National and subnational DRR and CCA management systems	OK
1.3 Financial arrangement	Regular budgetary arrangements of line ministries for DRR and CCA	It's difficult to separate the budget based on the particular purpose. CCA budget is mixed in the 3 ministries (Ministry of Planning and Investment, Ministry of Natural resources and environment, Ministry of agriculture and rural development). Besides, donors directly invest by project base. MARD doesn't have mandate and mechanism of collecting information from line ministries as well as local government and local authorities.
	Special funds for local and community-based DRR and CCA activities	MARD doesn't have reporting mechanism from line ministries about special funds. (especially about climate change issue)
	Payment for ecosystem services and insurance scheme	not easy to collect such information
2. Risk assessment		
2.1 Climate change impact analysis	Observation and analysis of hydro-meteorological data	have to follow hydro-meteorological law
	Climate change projection	scenario for climate change sea level rise (MONRE)
	Standard values of CC impact	MONRE doesn't officially set the standard values of CC impact About sea level rise, MONRE set some standard values
2.2 Hazard and risk mapping	Hazard and risk mapping of flood, storm surge, landslide and drought	have to improve law framework Most of detailed hazard maps and risk maps are confidential (can't be disclosed to public)
3. Planning and implementation*		
3.1 Disaster risk reduction	DRR plans and implemented projects for flood, storm surge, landslide and drought	OK
3.2 Standard guideline for disaster and climate risk assessment and planning		OK

\* Planning and implementation of DRR steps are merged here as the review points for both steps are similar.
